Prepared by the Committee on Textbooks:
J. L. Merian of the University of California at Los Angeles; C. H. Woodruff of the Long Beach, California, Public Schools; and M. E. Herriott of the Los Angeles City Schools, Chairman. The Committee is indebted to Mrs. Patricia Herriott for her able and generous assistance.

Introduction

The compilation of textbooks of 1931-1933 was so well received that this compilation of textbooks of 1934 has been made. A few books omitted for one reason or another from the previous list have been included with the books of 1934.

The response of publishers to the Committee's request was unusually fine. With but one exception, all of the principal textbook publishers cooperated fully. Most of them supplied books as well as bibliographical and annotative information. These books are to be placed on exhibit for the teachers of the Los Angeles City Schools. A similar but less representative exhibit last year was unusually well received.

As in the case of the previous list, only textbooks have been included. Workbooks, test booklets, and the like, are included only in annotations to parent texts. A few publications of similar nature, notably laboratory manuals and shop instruction sheets, have been listed because they are textbooks in fact if not in traditional make-up.

Supplementary readers and materials of a strictly reference nature are not included because they were not a part of the Committee's assignment. The growing use of reference books may, however, soon give these materials greater importance than textbooks in educational practice. The Society would be interested in learning whether a similar compilation of such materials would be in general demand.

No books planned strictly for "adult" education or for extra-curricular activities are included.

The classification of the texts, the bibliographical data, and the annotations are as accurate, complete, objective, and meaningful as space and the information supplied by the publishers would permit, although pared to the barest minimum.

The usefulness of the 1934 list depends in a measure upon the 1931-1933 list, which should be in the hands of everyone using the new list. Gradually, the handicap of unlisted earlier publications is being overcome. The successful older books are being brought up to date and issued as revised editions in such numbers that within another year or two few of the successful older books will be unlisted. Those worthwhile books remaining unlisted will undoubtedly be "classics" of the textbook trade and so well known as not to need listing.

All who use the 1934 list should also secure from the Society a copy of the 1931-1933 list.

M. E. Herriott.
